

Project Presentation: International Concepts for Waste Management

adelphi, Germany (July 2016)

Project overview

- Implementing partners: adelphi, intecus and FFU
- Funding agency: German Environment Agency
- Term: 02/2015 – 12/2017

- Project aims:
 - Analysing the current status of the waste and recycling management systems in four target countries
 - Conducting deficit analyses to identify respective barriers to development
 - Suggesting potential measures to further develop the waste management sectors
 - Discussing potential measures in country workshops

WP = Work package

Work package 1: Selection of four target countries

Selection criteria

Economic relevance

Country's interest

Political stability

Political relevance

Accessibility

Synergies

Replication potential

Development needs

Contacts

Analysis of 16 countries

Bulgaria

Croatia

Iran

Turkey

Output 1/2: Analysis of the current state of the waste and recycling management system in the respective target country

- Desk research
- Expert interviews

- Evaluation of collected information
- Writing country studies

- Country-specific information, e.g. demographics
- Industrial structure, urbanisation, infrastructure
- Environmental policy
- Waste management structures
- ...

Output 2/2: Analysis of deficits and identification of potential measures for further development

- Analysing deficits with respect to a more sustainable and resource efficient waste management
- Taking into account country-specific background and current situation
→ Identification of potential measures

**Political
measures**

**Institutional
measures**

**Technological
measures**

Outputs: Selection of workshop participants and preparation of workshop publications

- Identification of relevant stakeholders of the target countries' waste management
- Identification of relevant German waste management stakeholders
 - Exchange of experiences
- Publication of country-specific background information on current waste sector situation and preparation of workshop agenda, logistics etc. (workshop handout & workshop flyer)

Output: Workshops are realised

- Joint programme development with stakeholders from the target countries as well as with representatives of the German waste sector
- Realisation of country workshops, with participation of German waste sector representatives
- Transfer of results from analysis of waste sector situation (WP2) and discussion results from workshops into conceptual suggestions for the development of each country's waste management

Output: Publication of country-specific publications

- After the workshops, the project team will publish the results of the discussions with the target countries' stakeholders in country-specific brochures
- The publications contain the workshop results, based on the preliminary research and country studies

Output: Joint international closing conference in Germany realised

- Planning, preparation, realisation and evaluation of the closing conference
- Closing conference aims at jointly discussing the results from all four target countries
- Event is open to participants from other countries
